

# STACKER UPGRADE

Increase the capacity of your stacker

The Qubiqa Combistacker is an icon in our programme with more than 100 supplies. The first machine was delivered about 30 years ago.

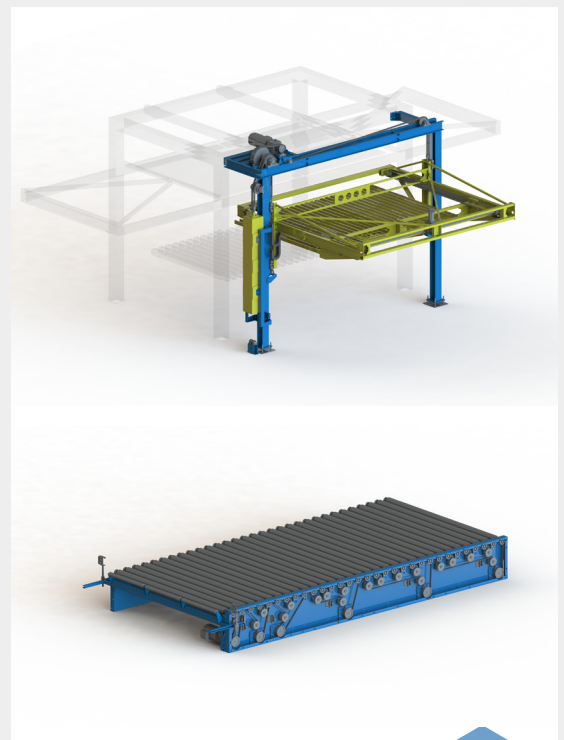

Since then, the machine has evolved and been upgraded in many ways, one of these upgrades being a capacity increase.

The capacity increase is reached in three stages:

- An accumulating roller conveyor with several drives at the inlet will deliver a charge of products instead of one product row at a time. This will increase your capacity from 8 to 10 layers/min.
- An intermediate elevator table is installed to work in conjunction with the main elevator table to eliminate the waiting time when stacks exit. Together with the accumulating roller conveyor, this will increase the capacity to 12 layers/min.
- A vacuum pre-stacker will pick up an incoming charge and drop it on top of the next charge, once the next charge is in position. This will reduce the capacity demand on the Combistacker. The combined accumulating roller conveyor and vacuum pre-stacker will increase the capacity to 17 layers/min.

#### Features:

- **Upgrades your Combistacker with the latest technology in safety, servo drives, guide wheels etc.**
- **Increases the capacity of up to 100%**

## ”UPGRADE YOUR STACKER FOR BETTER PERFORMANCE AND INCREASED CAPACITY.”

Qubiqa, which is the result of a merger between the former companies Univeyor and Seelen, focuses on innovative quality products and solutions for the optimization of internal logistics processes. We apply our expert knowledge in our core products and always have our customers’ “total solutions” in mind. Qubiqa intends to be the leading global supplier of intelligent and customized solutions based on innovative concepts. Qubiqa is “lean” – efficient and technologically geared for the handling of small-size as well as larger projects on a high, but cost-competitive level. The financial platform is solid, and when combined with our know-how and expertise we are ready to meet the competition both on the domestic market in Scandinavia and the UK and on the global export markets.

Qubiqa Automation in Esbjerg is a modern engineering and manufacturing company, and one of the leading researchers and developers of advanced packing and conveying systems. Qubiqa in Esbjerg was founded in 1945 and has experienced a significant development over the years. The export share is approx. 98 per cent, primarily in Europe, the US, Russia and Asia.
