

MULTIPACK UPGRADE

Replace existing pneumatic movements on your multipack machine with motors.

On the most recent versions of the Qubiqa Multipack Machine, the large air cylinders have been replaced with motors.

This makes the movements more silent, smoother, faster and less energy consuming.

We recommend that the air cylinders of the following movements are replaced by motors.

- The crankshaft driven movement of the backstop in the compression tunnel.
- The hold-back forks that maintain the compression during the welding cycle.

Features:

- **Reduces the air consumption of the machine.**
- **Makes the machine run smoother and faster.**
- **Reduces the noise level of the machine.**

“UPGRADE YOUR MULTIPACK MACHINE TO MATCH THE MOST RECENT QUBIQA MODELS”.

Qubiqa, which is the result of a merger between the former companies Univeyor and Seelen, focuses on innovative quality products and solutions for the optimization of internal logistics processes. We apply our expert knowledge in our core products and always have our customers' "total solutions" in mind. Qubiqa intends to be the leading global supplier of intelligent and customized solutions based on innovative concepts. Qubiqa is "lean" – efficient and technologically geared for the handling of small-size as well as larger projects on a high, but cost-competitive level. The financial platform is solid, and when combined with our know-how and expertise we are ready to meet the competition both on the domestic market in Scandinavia and the UK and on the global export markets.

Qubiqa Automation in Esbjerg is a modern engineering and manufacturing company, and one of the leading researchers and developers of advanced packing and conveying systems. Qubiqa in Esbjerg was founded in 1945 and has experienced a significant development over the years. The export share is approx. 98 per cent, primarily in Europe, the US, Russia and Asia.
