

# SAFETY HOOK UPGRADE

Automatic safety hook system for your machinery

The safety hook system increases your safety during maintenance, cleaning or attending to a problem.

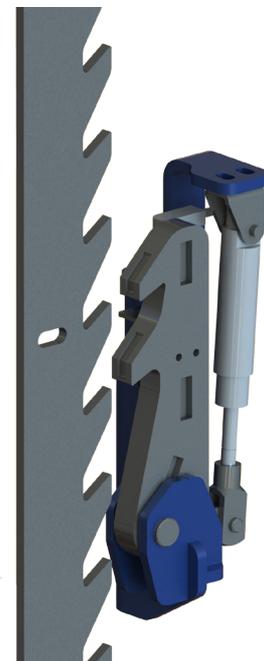

This safety system can be implemented on a large variety of systems, where you have a heavy section going up or down.

The system is activated in case of emergency stop, and when the staff needs to enter a protected area.

The system is pneumatically operated. The pressure keeps the hooks off the rack, and lack of pressure will trigger the safety system.

#### Features:

- Each safety system is customized to your specific requirements.
- Fail safety.
- Allowing quick access to your machine.

## ”SAFETY FIRST”

Qubiqa, which is the result of a merger between the former companies Univeyor and Seelen, focuses on innovative quality products and solutions for the optimization of internal logistics processes. We apply our expert knowledge in our core products and always have our customers’ “total solutions” in mind. Qubiqa intends to be the leading global supplier of intelligent and customized solutions based on innovative concepts. Qubiqa is “lean” – efficient and technologically geared for the handling of small-size as well as larger projects on a high, but cost-competitive level. The financial platform is solid, and when combined with our know-how and expertise we are ready to meet the competition both on the domestic market in Scandinavia and the UK and on the global export markets.

Qubiqa Automation in Esbjerg is a modern engineering and manufacturing company, and one of the leading researchers and developers of advanced packing and conveying systems. Qubiqa in Esbjerg was founded in 1945 and has experienced a significant development over the years. The export share is approx. 98 per cent, primarily in Europe, the US, Russia and Asia.
