

FILM STATION UPGRADE

New film station that meets your requirements for the future.

The demand for better ergonomics and automation is increasing. The functional requirements for film stations keep changing, which has led to changes in the way we design our systems. Perhaps, you find that you need a more compact film station to save space and improve ergonomics.

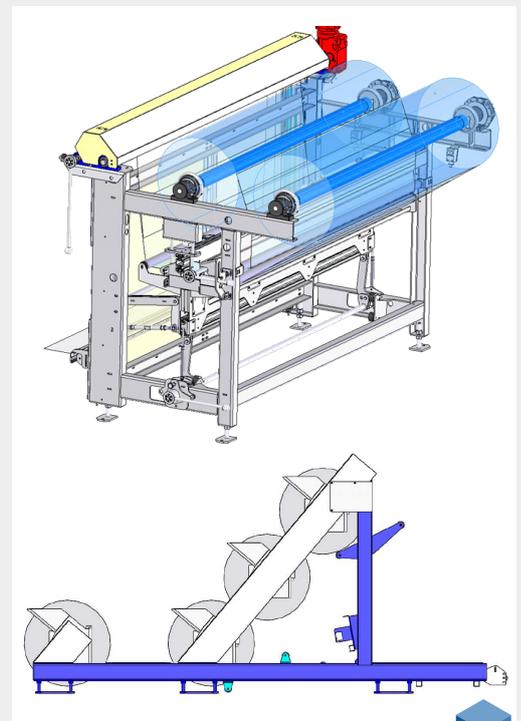

We offer a film station with a fully automatic film change. It holds two film reels for the upper film and two film reels for the lower film. When the old film runs empty (no film left on the roll), the new film is automatically welded to connect to the film feed – no stop in film feed to the machine.

Film stations can have many positions around or above the machine depending on preferred layout.

Qubiqa Automation offers to design a customized film station that suits your specific requirements – and there are numerous options available. All systems can be easily integrated into your existing plant.

Features:

- **Eliminate film scrap on replaced rolls.**
- **Automatic welding.**
- **Less manual intervention.**
- **Customized design.**
- **Pneumatic axles and safety chucks bushings with pneumatic brakes.**

”THE AUTOMATIC WELDING SYSTEM SAVES TIME, MAKES HANDLING EASIER AND ELIMINATES YOUR FILM SCRAP ON THE EMPTY ROLL.”

Qubiqa, which is the result of a merger between the former companies Univeyor and Seelen, focuses on innovative quality products and solutions for the optimization of internal logistics processes. We apply our expert knowledge in our core products and always have our customers’ “total solutions” in mind. Qubiqa intends to be the leading global supplier of intelligent and customized solutions based on innovative concepts. Qubiqa is “lean” – efficient and technologically geared for the handling of small-size as well as larger projects on a high, but cost-competitive level. The financial platform is solid, and when combined with our know-how and expertise we are ready to meet the competition both on the domestic market in Scandinavia and the UK and on the global export markets.

Qubiqa Automation in Esbjerg is a modern engineering and manufacturing company, and one of the leading researchers and developers of advanced packing and conveying systems. Qubiqa in Esbjerg was founded in 1945 and has experienced a significant development over the years. The export share is approx. 98 per cent, primarily in Europe, the US, Russia and Asia.
